Legal Efficiency and Growth in NPL Boosting: AI Revolution and Legal Challenges

The integration of Artificial Intelligence (AI) into the non-performing loan (NPL) sector marks a significant shift towards growth and efficiency. However, it also introduces legal challenges, especially in litigation and debt restructuring. As AI improves NPL management and recovery, there is a pressing need to revisit and update legal frameworks to address new issues. This scenario requires legal professionals to carefully balance the advantages of AI with the need to navigate its legal complexities, ensuring responsible use that aligns with evolving legal norms.

During this session, Carlos Lorenzo, CEO of EOS Spain, will share with us the Strategic vision of EOS as regards the use of AI technologies to increase the efficiency in the management of portfolios involving an immense number of proceedings, and will discuss with the **Andersen experts** the legal challenges affecting the market derived from AI technologies as well as other latest legal developments having an impact on the sector.

Guest Speaker

Carlos Lorenzo
CEO | EOS Spain

Speakers

Andrea Ferrandi
Partner | Andersen in Italy

Diogo Oliveira
Partner | Andersen in Portugal
